

2026 ACC CONFERENCE PRIMER

ATLANTIC COAST CONFERENCE

Conference outlook, tiers, projected order,
schedule inflection points and team directory.

WHAT DEFINES THE 2026 ACC?

One clear national-title-level favorite.

Three credible challengers with different risks.

A compressed middle where schedule can distort record.

Independent publication. Not affiliated with or endorsed by the Atlantic Coast Conference.

ACC AT A GLANCE

2026 CONFERENCE OVERVIEW

17 teams - 2026 preseason outlook

How to read the rankings: The **Primer power rating** estimates neutral-field team quality in points above or below an average FBS team. **Expected wins** is schedule-aware and reflects the full 12-game path. Those are intentionally different measures: a team can be stronger than another team while still projecting for fewer wins.

1. 60-Second ACC Briefing

Initial conclusions

Question	Answer
How good is the ACC?	One clear national-title-level team, three credible but flawed challengers, and an unusually compressed middle. Miami separates from the league on underlying quality; Clemson, SMU and Louisville form the next tier.
Title favorite	Miami. The Hurricanes are the only ACC team with a Primer power rating above +13, and their +22.0 rating gives them a substantial neutral-field cushion over the rest of the league.
Best challengers	Clemson, SMU and Louisville. All three have legitimate title paths, but none has Miami's combination of quarterback certainty, skill talent and two-sided ceiling.
Best dark-horse profiles	Florida State, Virginia Tech and Virginia. FSU has the strongest raw power of the group; Virginia Tech has major rebound potential; Virginia has the friendliest path and a sturdy line/defense floor.
Biggest league-wide storyline	Quarterback certainty and line continuity. The ACC has several credible teams, but many of them are replacing quarterbacks, offensive linemen, defensive-front production - or all three at once.
Schedule team to remember	NC State. The Wolfpack rank only 11th in ACC underlying power but sixth in expected wins because the schedule is the league's most favorable by SP+ SOS.

Conference identity: The ACC is top-heavy without being shallow. Miami is a legitimate playoff and national-title contender, but the league behind the Hurricanes is defined by tradeoffs. Clemson has the next-best raw power but major quarterback and line questions. SMU has the cleanest quarterback/coach/OL continuity among the challengers but must replace concentrated skill and defensive production. Louisville has a high-end backfield and defensive anchors but more uncertainty at quarterback and offensive line. Below them, roughly ten teams sit close enough together that quarterback play, schedule sequencing and one weak position group can move a team several places in the standings.

Bottom line: Miami should be the favorite, but the ACC is not a one-team league. The most likely challenger will be whichever of Clemson, SMU or Louisville best solves its specific transition problem. The middle is much harder to sort because projected record and underlying quality diverge sharply: Florida State and Georgia Tech can be better than their records, while NC State and Virginia have paths for the standings to look better than their neutral-field ranking.

Five things to remember

- 1 Miami is the separator.** The Hurricanes' +22.0 power rating is nine points clear of No. 2 Clemson (+13.0), and their 10.0 expected wins are also the league high.
- 2 The challenger tier is real but imperfect.** Clemson (+13.0), SMU (+12.0) and Louisville (+11.0) all profile as B+ teams, but each carries a high-leverage transition at quarterback, the line of scrimmage or both.
- 3 The middle is compressed.** Florida State through Duke span only 3.5 points of Primer power (+9.0 to +5.5), so schedule and availability can matter as much as small talent differences.
- 4 Quarterback stability is unusually valuable.** Miami and SMU enter with the league's clearest high-end QB situations; several peers are relying on transfers, open competitions or first-year Power Four starters.
- 5 Do not confuse record with quality.** NC State's favorable path and Florida State's difficult one are the cleanest examples of why a projected standings order cannot double as a power ranking.

2. Conference Power Structure

Tier	Teams	Read
Championship Tier	Miami	The ACC's only clear national-title-level profile. Elite skill talent, a proven imported QB and a still-high-end defense outweigh meaningful NFL attrition in both lines.
Contender Tier	Clemson, SMU, Louisville	All three can win the league. Clemson has the best raw defense/receiver ceiling; SMU has the best QB/staff/OL continuity; Louisville has the best run-game centerpiece and a strong defensive front. Each also has a clear structural risk.
Dangerous Middle	Florida State, Virginia Tech, Virginia, Pitt, Georgia Tech, NC State, Duke, Wake Forest, California, North Carolina	A broad group with enough talent to beat anyone outside Miami on the right week. The internal order is highly sensitive to QB translation, schedule and line play.
Rebuild / Long-Shot Tier	Syracuse, Boston College, Stanford	Each has a credible improvement path, but all three need multiple units to outperform their preseason baseline to become dependable bowl-level teams.

The most important distinction is between **tier ceiling** and **projected finish**. Florida State, for example, is fifth in ACC power but only ninth in expected wins because its schedule and line rebuild widen the downside. NC State is the inverse: 11th in power but sixth in expected wins because quarterback continuity and the No. 68 SP+ SOS create a much friendlier path.

3. Projected Conference Order

This is a schedule-aware projected order, anchored by expected overall wins and then adjusted editorially for team quality and uncertainty. It is not the underlying ACC power ranking.

Rank	Team	Expected season	Power	One-line thesis
1	Miami	10.0 wins - 10-2	+22.0	Clear favorite and playoff-caliber team; the only major concern is whether heavy OL/DL NFL attrition trims an otherwise elite profile.
2	SMU	8.3 - 8-4	+12.0	Kevin Jennings, Rhett Lashlee and three OL anchors give the Mustangs the cleanest continuity case among Miami's challengers.
3	Clemson	7.9 - 8-4	+13.0	Second-best raw power in the league, but the QB battle and major turnover on both lines create more downside than the brand name suggests.
4	Louisville	7.8 - 8-4	+11.0	Isaac Brown and a strong defensive core keep the Cardinals in the race; Lincoln Kienholz and a rebuilt OL determine the ceiling.
5	Virginia	7.8 - 8-4	+8.0	A veteran OL, deep backfield and strong defensive spine plus the No. 67 SOS support another upper-half finish even if 11 wins was the high-water mark.
6	NC State	7.1 - 7-5	+5.5	CJ Bailey and the league's friendliest schedule can carry the Wolfpack above their neutral-field ranking if a rebuilt defense is merely functional.
7	Virginia Tech	7.1 - 7-5	+8.5	The league's clearest rebound candidate: massive returning production and a new staff raise the ceiling, but QB/OL/CB uncertainty still matters.
8	Pitt	6.9 - 7-5	+6.0	Settled QB and veteran OL give the offense a sturdy base; the question is whether major WR/LB/DB turnover pulls down an otherwise bowl-caliber profile.
9	Florida State	6.6 - 7-5	+9.0	Better than this ranking in raw quality, but an entirely new principal OL and a difficult schedule make the Seminoles a classic better-team-than-record candidate.
10	Duke	6.4 - 6-6	+5.5	Walker Eget now gives the offense a named starter, but both lines and a defense replacing major contributors keep the Blue Devils near the bowl line.
11	Georgia Tech	6.1 - 6-6	+6.0	Backfield talent and defensive continuity are real; extensive QB/WR/OL turnover and a difficult schedule make six wins the safer midpoint.
12	Wake Forest	6.1 - 6-6	+3.5	Gio Lopez's system familiarity and a credible defensive front keep bowl eligibility alive, but repeating nine wins requires a large portal class to hit.

Rank	Team	Expected season	Power	One-line thesis
13	California	5.9 - 6-6	+3.0	Returning QB Jaron-Keawe Sagapolutele is a valuable stabilizer in a volatile league; defense and OL continuity keep the Bears near a toss-up bowl profile.
14	North Carolina	5.3 - 5-7	+3.5	Billy Edwards Jr. and clearer offensive direction should make UNC better, but heavy transfer dependence and a difficult schedule may hide that progress in the record.
15	Syracuse	4.3 - 4-8	-2.0	Steve Angeli and a veteran back seven create an improvement path, but WR/OL/front concerns make a full jump back to the ACC middle unlikely.
16	Boston College	3.9 - 4-8	-2.5	Bill O'Brien can produce a more coherent team than last year's 2-10 group, but offensive continuity is extremely low and the schedule is unforgiving.
17	Stanford	3.8 - 4-8	-2.5	The defense has a credible spine and QB Davis Warren provides role clarity, but the offense needs a major efficiency jump simply to reach average Power Four functionality.

4. The Title Race

Miami enters the season with the clearest separation at the top, while Clemson, SMU and Louisville form a credible but more conditional chase group. The question is less whether those three can win the league than which one can solve its biggest structural weakness quickly enough to pressure Miami.

Miami - the clear favorite

Why Miami can win it: QB Darian Mensah, WR Malachi Toney and RB Mark Fletcher Jr. give the Hurricanes the league's best proven offensive core, and the 2025 defense was elite by both raw and opponent-adjusted measures. Mario Cristobal, Shannon Dawson and Corey Hetherman also return, giving Miami unusually strong staff continuity for a roster with championship expectations.

Primary failure mode: Heavy NFL attrition on both lines is the one issue large enough to narrow the gap. Miami can absorb some trench regression and still be the ACC's best team, but a larger-than-expected OL/DL drop would pull an otherwise national-title-level profile back toward the pack.

Clemson - highest challenger ceiling, widest contender variance

Why Clemson can win it: The Tigers still pair a league-winning defensive ceiling with one of the ACC's best receiver groups. LB Sammy Brown, DE Will Heldt, CB Ashton Hampton, WR Bryant Wesco Jr. and WR T.J. Moore give Clemson enough proven high-end talent to support its **+13.0** power rating.

Primary failure mode: Quarterback and both lines are changing at the same time. If Christopher Vizzina or Tait Reynolds provides solid play and the fronts settle quickly, Clemson can push Miami; if not, the Tigers can remain a good top-25 team without becoming a true conference favorite.

SMU - cleanest continuity challenger

Why SMU can win it: QB Kevin Jennings, Rhett Lashlee and three returning OL anchors give the Mustangs the most stable offensive infrastructure among Miami's challengers. That continuity creates a high floor in a league where several peers are simultaneously replacing quarterbacks and protection structure.

Primary failure mode: Much of the rest of the roster is being rebuilt. Major turnover at RB, WR, TE and across the defense makes SMU more newcomer-dependent once the ball leaves Jennings' hands or the defense needs to create pressure.

Louisville - run-game and defense path

Why Louisville can win it: RB Isaac Brown can stabilize the offense while DL Clev Lubin anchors a defense with legitimate high-end pieces. Jeff Brohm raises the offensive floor, and the schedule avoids an SP+ top-15 ACC opponent.

Primary failure mode: Louisville has the weakest OL grade of the four primary contenders and is projecting Lincoln Kienholz into the starting quarterback role. The title case depends on the new QB/OL combination becoming functional quickly enough that Brown and the defense do not have to carry every high-leverage game.

The outside crashers

Florida State owns the best raw power (+9.0) outside the top four, but replacing all five principal 2025 OL starters creates too much variance for the primary contender tier. **Virginia Tech** has the league's biggest rebound profile with 69% returning production and a new staff, but the starting quarterback job remains unsettled entering the season. **Virginia** has a veteran OL, a strong defensive spine and one of the league's friendliest paths; its route to the race is winning close upper-middle games rather than overpowering the field.

5. Teams Most Likely to Be Better Than Their Record

Florida State

Florida State is the clearest example. The Seminoles rank **fifth in ACC power (+9.0)** but only **ninth in expected wins (6.6)**, and SP+ SOS No. 34 includes a difficult Virginia - at Louisville - at Miami - Clemson sequence around a bye. If Ashton Daniels gives FSU stable quarterback play and the rebuilt OL reaches competence, a 7-5 record could still describe one of the league's five best teams.

Georgia Tech

Georgia Tech is a **+6.0** team with only **6.1 expected wins** and SP+ SOS No. 38. The Yellow Jackets have enough backfield talent and defensive continuity to be a difficult weekly opponent, but QB/WR/OL turnover and a Louisville - at Clemson - Wake Forest - at Georgia finish can suppress the record. A 6-6 result would not automatically mean the team failed to improve.

North Carolina

North Carolina is another improvement-without-record-reward candidate. Billy Edwards Jr. and clearer offensive direction should raise the floor, but returning production is only 44% and SP+ SOS is No. 35. The at Clemson - Notre Dame - at Pittsburgh - at Duke run can punish an improving team before the rebuild fully settles, so five or six wins could still represent a meaningful step forward.

6. Teams Whose Record May Run Ahead of Their Power

NC State

NC State is the conference's strongest schedule-path example. The Wolfpack rank **11th in ACC power (+5.5)** but **sixth in expected wins (7.1)**, with SP+ SOS **No. 68**, seven home games and well-placed byes. CJ Bailey and staff continuity make an eight-win season plausible, but that result would not necessarily make NC State the ACC's sixth-best neutral-field team.

Virginia

Virginia is a subtler version. The Cavaliers are a solid **+8.0** team with a veteran OL and deep defensive back end, while **7.8 expected wins** are helped by SP+ SOS **No. 67**. Another strong record can be fully deserved while still running a little ahead of the underlying power ranking.

7. The Bottom of the Table

The lower half of the projected ACC table is not one uniform rebuild. Pitt and Duke have credible bowl-level foundations, Wake Forest and California have realistic six-win paths, and Syracuse, Boston College and Stanford enter with more work to do. The common thread is that each has at least one stabilizing piece that can keep the season from becoming purely developmental.

Pitt and Duke - bowl-line teams with different foundations

Pitt has one of the more trustworthy offensive starting points in the lower half. QB Mason Heintschel is settled, the OL returns a veteran core, and the 2025 defense was much better in EPA, success rate and run defense than its scoring rank suggested. The concern is concentrated turnover at WR, LB and DB. Pitt does not need a breakout to reach a bowl; it needs the rebuilt skill and second-level groups to avoid dragging down the QB/OL/edge continuity that already exists.

Duke is more fragile but still has a viable path to six wins. QB Walker Eget is now the named starter, RB Nate Sheppard and TE Jeremiah Hasley give Jonathan Brewer's offense two clear anchors, and the staff structure remains stable. The problem is breadth of turnover: 17 starting roles are gone, both lines are rebuilding, and the defense already needed improvement before losing major contributors.

Wake Forest and California - credible six-win paths

Wake Forest has a defense-first floor and a quarterback who already knows the offensive system. Gio Lopez's familiarity with Rob Ezell should reduce installation risk, while DL Langston Hardy and a returning front-seven core give the defense a chance to remain the more dependable side. Repeating nine wins is unlikely because the offense is heavily portal-rebuilt and the secondary also turns over, but the pieces are good enough for another bowl push if the new OL and skill rotation settle quickly.

California owns one of the lower half's most valuable stabilizers in returning QB Jaron-Keawe Sagapolutele. Offensive returning production is strong, and that continuity gives the Bears a workable base while a new staff and transfer-heavy defense settle. The downside is that OL, defensive and specialist questions are all live at once. Cal does not need to become an upper-half team to have a successful season; competent defense around a stable quarterback can be enough to live near 6-6.

Syracuse - continuity in the back seven, questions up front

Syracuse has a clearer improvement path than its **-2.0** power rating suggests. QB Steve Angeli returns, and 67% defensive returning production gives the Orange one of the league's more experienced back sevens. The problem is where the uncertainty sits: WR, OL and the defensive front are exactly the areas that can prevent a veteran quarterback and secondary from translating continuity into wins. Improvement from 3-9 is reasonable; a full return to the ACC middle would require multiple rebuilt groups to outperform expectations.

Boston College - more coherent, still a difficult climb

Boston College should look more organized than the 2-10 team it replaces. Bill O'Brien is building the offense around installed starter Mason McKenzie, and the defense at least has a veteran secondary plus a transfer-heavy front that can create more disruption than last year's unit. But offensive returning production is only 42%, the OL/TE picture is thin, and SP+ SOS No. 27 gives the Eagles very little margin for a slow start. Reaching bowl contention requires McKenzie and the rebuilt lines to accelerate the timetable.

Stanford - defense can buy time, offense must make the leap

Stanford's most credible foundation is defensive. ILB Matt Rose leads a unit with enough returning structure to keep the Cardinal competitive in stretches, and QB Davis Warren at least gives the offense role clarity in Tavita Pritchard's tempo/motion system. The larger issue is simple: an offense that was already inefficient needs a substantial jump while OL/WR roles remain unsettled, and SP+ SOS No. 29 is unforgiving. Stanford can be more coherent without being good yet; four or five wins would still represent meaningful progress if the offense becomes functional.

8. Quarterback Landscape

Quarterback certainty may be the single best separator in the league because so many teams are otherwise closely matched.

QB tier	Teams	Read
Clear high-end advantage	Miami - Darian Mensah; SMU - Kevin Jennings	The league's two best combinations of proven starter quality and system support. Both allow their teams to spend preseason attention on other roster problems.
Stable bowl/upper-middle floor	NC State - CJ Bailey; California - Jaron-Keawe Sagapolutele; Pitt - Mason Heintschel; Wake Forest - Gio Lopez; Florida State - Ashton Daniels	None carries Miami's national-star certainty, but each gives his team a defined offensive starting point. Lopez enters the season as Wake Forest's starter.
Credible transitions	Virginia - Beau Pribula; North Carolina - Billy Edwards Jr.; Syracuse - Steve Angeli; Louisville - Lincoln Kienholz	Each has a plausible route to solid Power Four play, but the surrounding transition or limited proof at the new role widens the range.
High-variance / still proving it	Clemson - Christopher Vizzina/Tait Reynolds; Virginia Tech - Ethan Grunkemeyer/Bryce Baker; Georgia Tech - Alberto Mendoza; Duke - Walker Eget; Boston College - Mason McKenzie; Stanford - Davis Warren	This group contains several teams whose season projection can move materially if the quarterback answer beats expectations. Duke exits camp with Eget named starter; Clemson and Virginia Tech still have genuine quarterback competitions.

Three quarterback situations matter disproportionately to the conference race. **Clemson** does not need elite QB play to have an elite defense, but it probably needs above-average play to close the gap with Miami. **Louisville** needs Kienholz to keep defenses from loading up on Isaac Brown behind a rebuilt OL. **Virginia Tech** has enough returning production for a major rebound, but the new staff's ceiling depends on getting a clean answer from Grunkemeyer or Baker.

The middle-class lesson is different: **Cal, Pitt, Wake Forest and NC State gain value simply by knowing what they are building around.** In a league with this much portal and line turnover, a B/B+ quarterback with system familiarity can be more valuable than a higher-upside but unsettled competition.

9. Line-of-Scrimmage / Roster Continuity Themes

The ACC title race may ultimately be decided less by skill talent than by **which contender survives its line transition.**

Team	OL read	Defensive-front read	Why it matters
Miami	B, down	B+, down	The Hurricanes lost multiple NFL offensive linemen plus first-round edge/front talent. They have enough stars elsewhere to absorb regression, but this is the clearest threat to an otherwise elite profile.
Clemson	B-, down	B, down	Both lines are replacing meaningful production at the same time as the QB changes. Sammy Brown and the back seven can stabilize the defense, but the margin for error is smaller.
SMU	B+, stable	B-, down	The returning OL anchors are a major comparative advantage. The defensive front is the bigger concern after losing the top four sack producers.
Louisville	C+, down	B+, stable	The defense has the more trustworthy line. Offensively, Isaac Brown's ability to create efficient early-down runs is central to protecting a new QB and rebuilt OL.
Florida State	C+, down	B-, down	All five principal 2025 OL starters are gone, making cohesion the defining variable of an otherwise credible top-five ACC power profile.

Below the contenders, **Virginia and Pitt own two of the league's most useful stabilizers.** Both carry B+ offensive-line grades, giving Beau Pribula and Mason Heintschel better protection environments than many similarly rated ACC quarterbacks. Wake Forest's B+ defensive front is another quietly important floor piece.

The opposite issue appears throughout the lower half. Duke is rebuilding both lines; Cal pairs quarterback continuity with line and defensive turnover; Syracuse has a veteran back seven but a rebuilt front; Boston College and Stanford both carry C-range OL/DL concerns. This is also where portal economics show up most clearly: middle-tier programs can develop players successfully and still spend the next offseason replacing them, which makes depth and second-line roster quality especially important by November.

10. Schedule & Swing Games

Most favorable paths

- **NC State - SP+ SOS No. 68:** Seven home games and well-placed byes create the league's clearest path for record to exceed power ranking.
- **Virginia - No. 67:** The Cavaliers have enough line/defensive quality to exploit the schedule rather than merely survive it.
- **California - No. 63:** A moderate slate with six home games gives the Bears a realistic bowl path if the rebuilt defense settles.
- **Louisville - No. 60:** The Cardinals avoid an SP+ top-15 ACC opponent, which matters in a league where several challengers have more punishing top-end matchups.
- **Pitt - No. 58:** Four straight home games to open the season give the new skill rotation time before the travel burden increases late.

Most demanding paths

- **Boston College - SP+ SOS No. 27** and **Stanford - No. 29** face difficult schedules while already carrying bottom-tier power profiles.
- **Florida State - No. 34** and **North Carolina - No. 35** are the two strongest candidates for the schedule to obscure actual improvement or quality.
- **Georgia Tech - No. 38** closes with a particularly difficult four-game stretch.
- **Clemson - No. 41** has enough raw power to survive its schedule, but the combination of LSU, Miami and multiple road swing games limits the margin for a slow QB transition.

Games most likely to shape the race

- 1 **Oct. 3 - Miami at Clemson** - the single clearest ACC measuring-stick game: the league favorite against the highest-powered challenger.
- 2 **Sept. 19 - SMU at Louisville** - a direct comparison between the continuity challenger and the run-game/defense challenger.
- 3 **Sept. 7 - SMU at Florida State** - an early test of whether FSU's raw power can overcome its line rebuild against one of the league's most stable QBs.
- 4 **Oct. 31 - Clemson at Florida State** - two high-ceiling teams with major line questions; the loser's path to Miami becomes much narrower.
- 5 **Oct. 17 - Florida State at Miami** - FSU's most direct chance to turn "better than the record" upside into a real title-race result.
- 6 **Aug. 29 - NC State at Virginia** - a useful separator among favorable-path upper-middle teams.
- 7 **Nov. 28 - Virginia at Virginia Tech** - rivalry stakes plus a potential late sorting game for the league's rebound/upper-middle tier.

The sequencing story matters almost as much as raw SOS. Miami's bye arrives immediately after Clemson and four of its final five games are at home. Clemson gets a reset immediately after Miami. Louisville's hardest ACC run comes as five straight games without a bye. Florida State's Virginia → at Louisville → at Miami → bye → Clemson sequence can determine the season before November fully develops.

11. Teams to Watch

Virginia Tech - the rebound team

No ACC team combines a worse 2025 record with a more obvious path to a large 2026 jump. Virginia Tech returns **69% of production (No. 5 nationally)** and adds a new James Franklin/Ty Howle structure. The problem is that the most important unknowns - QB, OL and corner - are also the positions most capable of suppressing that rebound. A seven-win season is the midpoint; nine wins is plausible if the new offensive structure lands immediately.

Virginia - regression without collapse

Virginia is almost certain to look worse than its 11-win 2025 record, but that does not make the Cavaliers a bad team. The veteran OL, deep RB room and strong secondary create a solid floor, and the schedule remains favorable. The useful question is not "Will Virginia regress?" but **how far can the record fall before it stops reflecting genuine upper-half ACC quality?**

Florida State - widest upper-tier range

FSU has a top-five ACC power rating and enough QB/WR/RB talent to threaten the contender tier, but replacing an entire principal OL five while turning over major defensive pieces is a massive cohesion test. The Seminoles can finish 7-5 and be dangerous, or solve the line early and push toward the 9-3 ceiling.

Pitt - an increasingly offense-led identity

Pat Narduzzi's reputation still points readers toward defense first, but the 2026 roster may be easier to understand from the other side. Mason Heintschel is settled, the OL is veteran, and Kade Bell can build around a clear offensive core. The defense was better than its scoring rank in 2025, but the LB/secondary turnover makes maintaining that standard less automatic.

California - the value of quarterback stability

Cal is not projected as an upper-half team, but returning QB Jaron-Keawe Sagapolutele gives the Bears something several more talented peers do not have: a known offensive organizing point. If the transfer skill group works quickly, the offense can keep Cal bowl-relevant while the new defensive structure develops.

North Carolina and Syracuse - improvement can hide in the standings

Both teams have credible reasons to be better. North Carolina has clearer QB/play-calling structure; Syracuse gets Steve Angeli back and returns a veteran defensive back seven. Both also face schedule and roster constraints that can keep the improvement from turning into a dramatic win-total jump. They are useful reminders that **development and record are not the same thing.**
